

Walter Valentine Town Forest - E-18 + E-19 ESTIMATED location

Parcel lines & buildings from NRPC. 5' contours derived from 2011 LIDAR. Wetlands & Ponds from NWIPlusNH 2021. Roads from NH DOT. Red circles/stars = wall shadows as seen in areal photo/LIDAR data; red diamonds are walls I located with accurate GPS heavy green dashed line + length: my estimate of actual E-19 lines based on finding well & walls mentioned in deed + dimensions from deed All the trails have been GPS'ed using my accurate GNSS receiver, purported to be $\pm 4'$ (I think $\pm 10'$ is more realistic in dense laurel forest). Multiple GPS tracks usually within 8' of each other, compared to 60' with hand-held units. GPS grid is WGS84.
